ISSUE #5, DECEMBER 12, 2005

ARE ALL PROTEINS CREATED EQUAL?

Almost all nutritional guidelines state that the protein level in a weanling's ration needs to be 16 - 18%. However, this is a bit misleading. If we examine a weanling's protein needs in terms of amino acids, (the basic elements that make up the proteins), we can see that protein levels need not be so high. For example, a weanling requires high levels of the amino acid lysine. If we feed proteins that contain large amounts of lysine, we can meet this requirement with 2 - 3% less protein in total. When shopping for a feed, look for quality protein sources, such as **Pennwoods 2 to 12**, which uses lysine - rich, all - milk protein.

HORSE OF THE MONTH

Meet **NeBrosPatriot**, who is featured in the current issue of the **Draft Horse Journal**. The Nebergall brothers' stallion was raised on a steady diet fortified with **Pennwoods NXT-Generation**. With it's unique blend of vitamins and minerals on a hi-fat, **cool energy** carrier, **NXT-Generation** is a product that helps your horse reach its full potential.
